B-058/2012

## Reference letter

In 2009, we successfully completed the implementation of the IPOsystem production management system. It was a difficult period in our company life - increased requirements from our clients related to the time of completion, quality and complexity of orders. Our planning, accounting and quality control tools limited our flexibility.

Working together with the UIBS team, whose creativity and commitment should be emphasized, resulted in the development of solutions beneficial for our plant, fully in line with the principles of work according ISO and AQAP quality systems.

The innovative functions of IPOsystem allowed us to achieve above-average performance of our employees. The system allowed not only to optimize employment, but also contributed to the full identification of processes, allowing for the achievement of the highest quality standards. It is worth noting that the efficiency of the use of resources has increased by nearly 100%. These parameters allowed us to obtain additional orders and contributed to the increase of our competitiveness.

We confirm the professionalism and high quality of cooperation with consultants from UIBS Teamwork, who were open to our suggestions and fully prepared us to work in the new System.
